Re: Royal Canadian Mint Process Cooling System – Letter of Testimonial

To Whom it May Concern:

KGS Group were the design engineers and construction administrators for a new process cooling system at the Royal Canadian Mint incorporating their first geothermal cooling system. Westland Construction was awarded the construction contract and KGS provided contract administration during the construction period of 18 months.

During this time KGS worked closely with the project manager for Westland Construction. The project went very well thanks to the project manager's due diligence and attention to the project requirements and schedule. Weekly meetings were held to keep this fast-track project on schedule with Westland and the client group. We found that working with Westland Construction was a genuine pleasure and the project was successfully completed with minimal issues and resulted in a satisfied client.

Yours truly,

Ray Bodnar, P.Eng.
